LOWER RISK

HIGHER RISK

RISK LEVEL 4 – Low Investment Risk

Preserving the value of your investments remains important to you and you would like to maintain the real value of your investments against inflation. Your portfolio is likely to be more evenly balanced between equities and fixed income investments. The amount invested in equities is such that your portfolio is likely to experience some market volatility in exchange for the potential of increased levels of return.

Asset mix

- Cash
- Equities
- Fixed income
- Alternatives

Asset class	Asset	Weight*

Key Investor Information Documents (KIIDs) are available online at www.brewin.co.uk

*Actual level will reflect benchmark composition at each rebalance date.

Charges for this portfolio	Estimated underlying fund charges ²	0.21%
	BPS fee	0.70%
	Total cost	0.91%

1. The funds annotated have a small one-off charge as detailed in the KIIDs which will marginally increase the total cost in the first year above the amount shown in this table.

2. Ongoing Charges Figure – an estimate of the cost associated with investing in external collective funds. The nature of collective funds means that charges incurred in the running of the fund, such as management fees, transaction costs and administrative charges, are included in the total fund valuation. Such costs are not charged directly to Brewin Dolphin portfolios, but impact indirectly through the corresponding reduction in the value of the collective fund. Fund managers quote such costs as a percentage of the overall fund value. This is referred to as an Ongoing Charges Figure (OCF).

Historic asset mix characteristics for the last 5 years

Average total return per year	5.7%
Gain over the period	32.2%
