LOWER RISK

HIGHER RISK

RISK LEVEL 8 – High Investment Risk

You are looking to maximise your investment returns by having a portfolio invested almost entirely in equities. Significant levels of volatility and more frequent changes in the value of the investments can be expected, but you are willing to accept these risks to achieve your investment goals.

Asset mix

Cash	Cash	1.00%

Key Investor Information Documents (KIIDs) are available online at www.brewin.co.uk

*Actual level will reflect benchmark composition at each rebalance date.

Charges for this portfolio	Estimated underlying fund charges ²	0.11%
	BPS fee	0.70%
	Total cost	0.81%

1. The funds annotated have a small one-off charge as detailed in the KIIDs which will marginally increase the total cost in the first year above the amount shown in this table.

2. Ongoing Charges Figure – an estimate of the cost associated with investing in external collective funds. The nature of collective funds means that charges incurred in the running of the fund, such as management fees, transaction costs and administrative charges, are included in the total fund valuation. Such costs are not charged directly to Brewin Dolphin portfolios, but impact indirectly through the corresponding reduction in the value of the collective fund. Fund managers quote such costs as a percentage of the overall fund value. This is referred to as an Ongoing Charges Figure (OCF).

Historic asset mix characteristics for the last 5 years

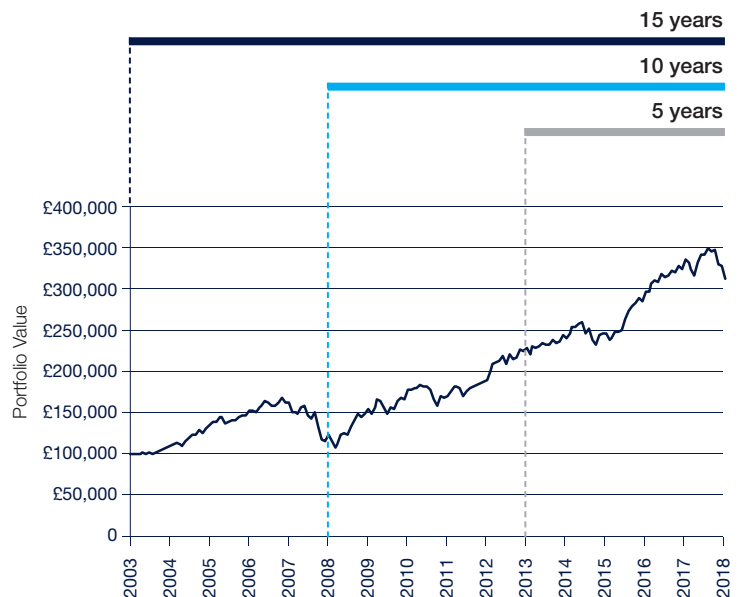

Average total return per year	6.5%
Gain over the period	37.2%
Largest fall in value during the period	10.4%
