Defaqto MPS Reviews

This document is designed to provide the reader with a quantitative overview of the portfolio reviewed. The review then goes on to examine information of a more qualitative nature, which has been obtained through an interview process with the portfolio manager/s.

The qualitative information covers specific areas including the portfolio manager's philosophy, their people, and the processes they employ. Additional information is also provided on their research capability, the resources they have at their disposal and how they manage risk. All of this information goes towards creating this comprehensive Portfolio Review.

Defaqto Ratings

Ratings to help advisers and their clients make better informed decisions

The Defaqto experts have created a range of ratings to help advisers find the best product or proposition for their clients.

Show at a glance how a portfolio family performs in comparison to the rest of the market.

Demonstrate the comprehensiveness of products across a range of areas, from pensions to DFMs.

An overall assessment of service – by advisers for advisers.

Suitability ratings to support compliant advice

Defaqto have created a set of ten Risk Profiles, and four Income Risk Profiles with corresponding ratings to which portfolios are mapped using a robust process. This helps advisers to evidence suitability for their clients in both the accumulation and decumulation phase:

Brewin
Dolphin

Executive summary

This portfolio is part of a range of seven portfolios, with expected risk and return varying through the range.

There are 31 investment professionals behind these portfolios.

The portfolio's strategic asset allocation is based on the results of an optimisation process.

The portfolio is tactically adjusted each month to take account of key changes in financial markets as well as RBC Brewin Dolphin's latest investment views.

As well as quantitative screening and qualitative due diligence, responsible investment is integrated across all of RBC Brewin Dolphin's research and all of the managers selected for inclusion in the portfolio are UNPRI signatories.

The underlying investments are made up of funds, including RBC Brewin Dolphin's MI Select Managers funds, managed using segregated mandates to reduce the OCF, increase investment capacity and leverage the skills and ideas of their chosen fund managers.

Investment objective

The portfolio's objective is to provide outperformance of the IA Mixed Investment 20-60% Shares over the medium to long-term. Returns will be generated through both capital growth and income, with a bias towards developed and liquid capital markets. The risk will be diversified by holding collective investments. The management of the portfolio aims to meet the objective conservatively by taking managed risk through fund selection and asset allocation.

About RBC Brewin Dolphin

The firm's origins can be traced back to 1762. They have been managing client's discretionary portfolios in partnership with advisers for more than 30 years.

In September 2022, Brewin Dolphin formally became part of the RBC group of companies, creating a wealth manager covering the UK, Channel Islands and Ireland with over £50 billion in assets under management, the majority of which is under discretion.

RBC Brewin Dolphin has more than 30 regional offices and over 2,100 employees and offers personalised wealth management services from bespoke,

discretionary investment to retirement planning and tax-efficient investing.

In addition to bespoke discretionary management, RBC Brewin Dolphin offers seven Active MPS, seven Passive Plus MPS and five Sustainable MPS, with expected risk and return varying through each range. They also have two fund ranges, the multi-asset Voyager fund range, which consists of six risk-rated multi-asset funds and the MI Select Managers fund range which spans five asset classes, three equity funds, one bond fund and an alternatives fund.

Quantitative review

The quantitative data that appears over the following pages has been generated by Defaqto using a combination of third-party and proprietary data sources and data provided by the asset manager. The information reflects the availability of data as at the dates highlighted.

All information reflects the investment solution specified in the information and classification table below.

Philosophy

The investment philosophy behind the portfolios in this range is based on the following key principles:

- Protection against inflation
- Balancing risk and return
- Investing in quality assets for the long term
- Diversification
- Seeking attractively valued growth opportunities
- Cost conscious

Responsible investment is integrated across all of RBC Brewin Dolphin's research, rather than being just for their Sustainable portfolios. ESG criteria are assessed in all cases as part of the fund due diligence process. This is also performed through active stewardship. The investment team at RBC Brewin Dolphin monitor portfolio holdings and engage directly with fund managers on investments in their funds that are assessed to be a material point of concern as part of their 'controversy tracking' process.

All of the managers selected for inclusion in the portfolio are UNPRI signatories. As part of that commitment these managers incorporate ESG factors into their investment decisions and are active investment owners.

For the following five asset classes - UK Equity, UK Equity Income, North American Equity, Bonds and Alternatives - a 'segregated mandate' approach is used. The chosen ACD (Maitland Institutional) runs a segregated account and these segregated accounts are aggregated into a single fund. RBC Brewin Dolphin believe the advantages of this approach are: one less layer of costs; lower turnover; and a more bespoke approach where the assets are run according to an investment management agreement and lower fees can often be negotiated.

The above five asset classes form the majority of the portfolios in this range and their weights are highly unlikely to drop to zero. For the other asset classes, third party funds will be selected outside of the manager of managers approach.

People

There are 31 investment professionals in the research area, averaging over 11 years of relevant industry experience per individual. The research area is primarily comprised of five teams: Equity Fund Selection, Direct Equity Research, Fixed Income and Alternatives Fund Selection, Investment Strategy and Central Investment Solutions. A full breakdown is visible in the organisation chart on the next page.

Davina Rich is the Head of Research, responsible for the first three teams above; and Guy Foster is Chief Strategist, responsible for the other two teams.

MPS (and fund) governance is split into three areas: investment governance, sustainability governance and

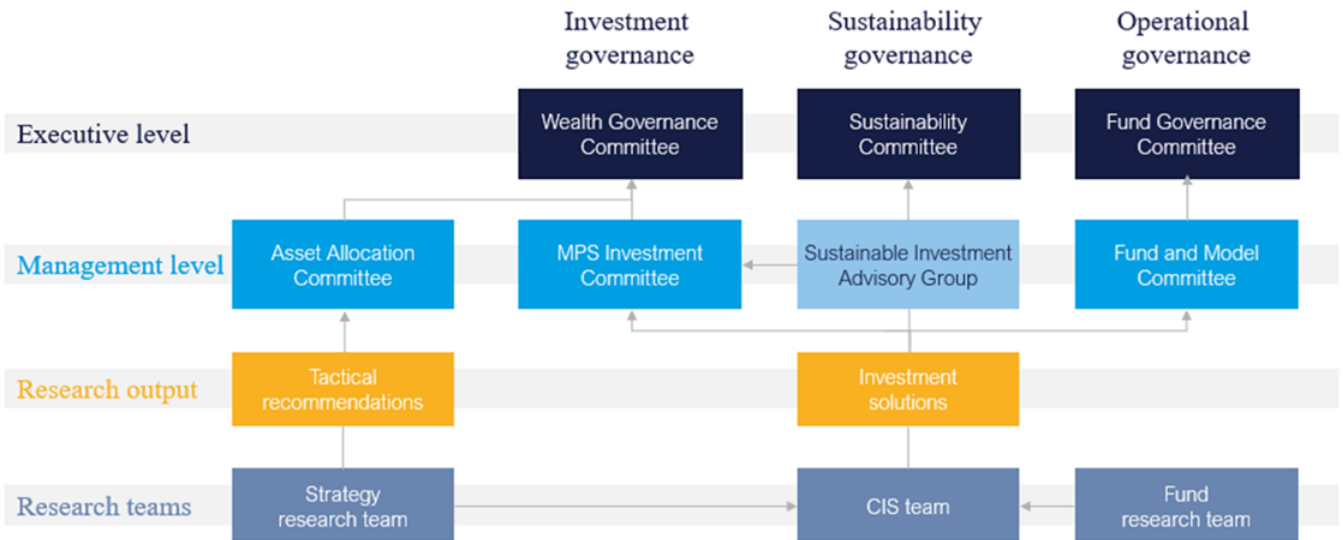

operational governance. At Exco level these are covered by the Wealth Governance Committee, Sustainability Committee and Fund Governance Committee respectively. At Management level they are covered by the MPS Investment Committee, Sustainable Investments Advisory Group and Fund & Model Committee.

There is also an Asset Allocation Committee, which determines the portfolio's strategic asset allocation and reviews the portfolio tactical asset allocation monthly.

Well resourced, experienced and diverse: 27 investment professionals averaging over 13 years of relevant industry experience

Process

The investment process can be broken down into five stages: strategic asset allocation; tactical asset allocation; investment selection; portfolio construction; and implementation/ongoing risk monitoring.

1. Strategic asset allocation (SAA) is determined by the Asset Allocation Committee and Strategy Research Team, based on the results of an optimisation process. The return inputs for this are forward-looking views produced by the Strategy Research Team and reviewed by the Asset Allocation Committee. The risk inputs are based on past volatilities, using 40 years of monthly and 25 years of daily data. The SAA is reviewed annually and the inputs are updated to reflect RBC Brewin Dolphin's forecasts. Following this, changes may be made to the SAA to optimise the portfolio.

2. Tactical asset allocation. The portfolio is tactically adjusted each month to take account of key changes in financial markets as well as RBC Brewin Dolphin's latest investment views, looking roughly 12-18 months ahead. Any changes to the asset allocation are recommended by the Strategy Team. The portfolio is also kept in line with its risk profile.

3. Investment selection. Positions are implemented using third party funds/managers. Funds included in the portfolio will have been reviewed by the Fund Research Team and be on their 'buy list'.

The passive holdings, primarily equities and bonds, will usually be tracker funds (rather than ETFs). The choice of fund will depend on the index being tracked, its tracking error/difference and its replication method. In the case of the active holdings, mainly alternatives, the Fund Research Team start with a quantitative screen in order to identify potential managers. This is based on risk-adjusted performance on a discrete basis (to prevent one very good year or quarter flattering the numbers).

The Fund Research Team then go on to perform qualitative due diligence on the funds passing through the above screen in order to try and determine where the outperformance has come from and whether it is likely to be repeatable. This considers factors such as the financial strength, organisational integrity and stability of the investment firm as well as the key people and their support. Manager access and full portfolio transparency on a timely basis are also important to RBC Brewin Dolphin.

As mentioned in the 'philosophy' section, RBC Brewin Dolphin's fund research considers ESG factors, seeking to understand how fund managers integrate ESG into their fund decision-making as well as their approach to stewardship. For all the funds they cover, RBC Brewin Dolphin will engage with the managers on material ESG issues. The fund analysts work to ensure that fund managers engage with the companies they own in a constructive manner.

RBC Brewin Dolphin use MSCI to provide an independent ESG score for this and their other portfolios (a weighted average of the scores of the underlying funds which in turn are weighted averages of the MSCI scores of the underlying companies). This rating measures the portfolio's resilience to long-term, material ESG risks. It does not form part of the due diligence process but instead is information provided to clients.

4. Portfolio construction. Style Analytics 'skylines' are used to monitor the overall investment style. Manager turnover averages around 20%.

5. Implementation/ongoing risk monitoring. Managers are seen twice a year on average, with additional scrutiny if there have been any issues such as poor or unexpectedly good performance.

Risk management

This and the other portfolios are risk profiled by seven different risk profilers - Defaqto, Dynamic Planner, EV, Finametrica, Morningstar, Synaptic and Oxford Risk.

The MPS Investment Committee review portfolio risk as part of their monthly pack. Risk measures looked at include expected tail loss (all asset classes) and duration (bonds only).

The tactical asset allocation has a $\pm 7.5\%$ tolerance at a high asset class level (cash, bonds, equities and alternatives).

About Defaqto

Defaqto is a leading financial information, ratings and fintech business that supports financial institutions, intermediaries and consumers to make smarter financial decisions.

Maintaining the UK's largest financial product database, Defaqto uses proprietary research methodology to develop independent ratings, reviews, insights, and technology that raises industry standards, powers consumer choice, and helps the industry to meet evolving consumer needs.
